Kawaii Penguin Face The latest editions of Adobe Photoshop have more and more tools designed specifically to create images in the Japanese style of cute, adorable, and cuddly animals. These tools are called the Kawaii category, which uses the Japanese word for cute. When we created this category, we searched for the most popular drawing tools, starting with a search for a simple outline tool and then branching out to more advanced functions. We found that many people who are digital artists are uncomfortable using the standard tools from the template library to create these adorable animals. They often end up with monochromatic drawings that don't come close to the real look. So, we added our own line of tools that create cool, realistic Kawaii animal art. Today, the Photoshop Kawaii category includes two tools — Bamboo Brushes 1 and 2 that allow you to create a variety of Kawaii designs. We'll demonstrate the Bamboo Brushes tool in Photoshop today. To use the Bamboo brushes tool, follow these steps: • Open up a new blank PSD document. • Select the CorelTool: Stroke tool. • Open a new layer above the brush tool, and name it Bamboo Brush 1. • Select the tool, and click the Load Brush button. • Using the Bamboo Brush, draw a line across the screen. • Use the small Tab key to adjust the width of the line. While you're drawing with the Bamboo Brush, you can take a look at the table below to see how the new line will look. The table's first row shows the value between 0 and 255, and the second row shows the brightness. Red values close to 255 will result in a brighter line, and the right number will give you a darker line. Values

Brightness Value	0	00%	255	100%	220	20	200	16	190	12	180	8	170	4	160	0	145	24	135	18

Isolation and characterization of a glycine-rich cation-binding protein in mouse ependyma. Ependyma contain a 70-kDa glycine-rich protein that is associated with ion transporters. The protein was purified from mouse ependyma by ion exchange, C4 reverse phase and affinity chromatography. The purified protein was homogeneous by SDS/PAGE, and had a molecular mass of 70 kDa. Gel filtration chromatography revealed the protein to be a glycoprotein that likely interacts with other cell surface proteins. The protein was highly sulfated at its amino terminus, and the sulfate content decreased when ependyma were cultured in 5 mM glycine, which has previously been shown to stabilize protein sulfation. Ependymal cultures had only trace amounts of the 70-kDa glycine-rich protein. In addition, ependymal cultures expressed a lower molecular weight form of the protein that was almost identical to the purified 70-kDa protein. Western blotting revealed the 70-kDa protein to be a developmentally regulated protein, and it was detected in embryonic day 14-17 ependyma, but not in embryonic day 10-13 ependyma. The findings suggest that the glycine-rich 70-kDa protein is important to ependymal ion transport functions and may be involved in developmental maturation. Spirometry in cystic fibrosis patients may be improved by selecting age-specific reference values. Cystic fibrosis (CF) patients frequently exhibit abnormalities in lung function tests. Lung function is generally most severely affected between the ages of 3 and 6 years, and then declines gradually. We have studied the influence of selecting an age-specific normal range for assessing the contribution of this disease to lung function in CF patients. Reference values for the forced expiratory volume in one second (FEV1) and the forced vital capacity (FVC) were selected from the data for the Global Lung Function Initiative Phase 3 software, and then compared with the reference values recommended by the American Thoracic Society (ATS). Observed FEV1 and FVC values were divided into the following categories: normal, mildly abnormal, moderately abnormal, severely abnormal, and abnormal (reversibility was not determined). Analysis of the observed percent predicted values for FEV1 and FVC revealed that the ATS recommended reference ranges for these values were inappropriate for approximately 60% of patients over the age of six years.

Last updated on. From the section Tennis Cortana has more than 1.1 million followers on Twitter Cortana, Microsoft's new artificial intelligence assistant, is available on iPhones and the new iPad, it has been revealed. The Siri-inspired app, designed to help people remember things, can guide users on their way home, remind them to buy milk and find them restaurants. Cortana is also the name for the character of the same name from the Halo video game series. The new AI assistant is now part of Microsoft's Windows 8 OS. Despite its long-standing reputation for arriving on computers and tablets first, Microsoft has been playing catch-up when it comes to the smart home. The company's new assistant takes the form of an iPad app and comes with more features than its competitors. Cortana listens to users and learns about what they do to track their daily routines and habits. It can then suggest what is "most important" at any given time. Once inside Microsoft's household assistant, users can ask it to play music, order a takeaway, or switch off the lights. Cortana was first unveiled in November as a featured app on the Windows Phone 8 mobile platform. It has been dubbed the "female Siri", said to have the same ability to find records and recipes as Apple's rival. Q: CMakeLists.txt for another project? I need to use a different CMakeLists.txt in an existing project that I don't own, the project has CMake scripts in the CMakeLists.txt, and I also have that project installed on the system, I don't have the source code. I know I can use the EXTEND function to access the functions of the external project, but I'm not sure where to call those CMake functions from. A: Just wrap your module in an Executable() target, and use add_custom_target. CMake 2.8.12 supports Executable() directly: function(a) set(a "world") endfunction() add_custom_target(my_executable \${a}) If you are trying to do this in a different directory than the one containing your module, you'll have to copy everything in your module into an empty directory (of course, you can't do any of that if you
