All2PDF Pdf Creator is a program which can convert any printable document to the PDF format. In order to use the application, you can either run its executable file or access the printing function from any document that supports it. The interface of All2PDF Pdf Creator is based on a standard window in which you can access few options. For example, you can enable All2PDF Pdf Creator to automatically open the file or containing folder after conversion. Once you specify the output destination and format, you can proceed with the conversion process. In addition, you can edit PDF metadata (title, subject, keywords, author), add a watermark (text only), as well as upload files to a FTP server or via HTTP. On top of that, you can resize images, distribute files and enable All2PDF Pdf Creator to delete files after distributing, compress files created with the ZIP format before distribution, switch to batch conversion mode, open the output folder, and more. The program runs on a barely noticeable quantity of system resources, takes a reasonable amount of time to complete a task and manages to keep an excellent quality when it comes to text, shapes and images. No errors have occurred during our tests. There is no help file available and the unregistered version is severely limited but, other than that, we strongly recommend All2PDF Pdf Creator to all users. All2PDF Pdf Creator Links:
