For more information on all EA Sports titles, visit ea.com. My Take Overall, FIFA 22 will be the most impressive and next-gen FIFA game to date. The game uses some of the best physics and physics-based animations I've seen in a game to make passes, tackles, and headers easier and look more realistic. In addition, it has the most visually striking stadiums and environments I've seen on the new consoles. One criticism of FIFA is that its gameplay doesn't feel as responsive or responsive as it should for a game that runs on the Xbox One X. While FIFA 22 offers all of the intuitive controls to make your character look and feel authentic, there is a learning curve and responsiveness when shooting for the goal. The game requires coordination, so make sure you are using the right analog stick and crosshairs to assist in your passing. In addition, I noticed that shots and passes looked worse than previous releases, maybe a side-effect of the new sport engine. The new "Dynamic Tactics" is a welcome addition that gives you a little more control over when you call your team into offense or defense. For example, you can tell your players to only attack after receiving a pass, or to not attack until pressing a special button. FIFA 22 has great improvements to go along with all of the new features and enhancements. In addition, it uses the Xbox One X's hardware to maximum potential to create an incredible game experience. **[**Update**]** According to EA Sports, despite the good ratings on the new Xbox One X, they decided to remove some of the X enhanced features from the Final Rating due to the lack of sales. Check out the new review scores in the image below. Related checkin message for after the lockout is a good idea and the usual "improvement" of the repos is not a good idea unless the change is really, really really really stable and that change is really really really really really really widely applied and that change is really really really really
