First, you'll want to download the full version of Adobe Photoshop. Make sure that you download the latest version, since earlier versions may not support the newest features in the software. Additional training options include on-demand training videos that can be purchased individually or as a whole course. There's also a free app called Photoshop for iPad ($11.99), which provides many of the same features available in a real app, plus some useful extras, such as grid and frames. All the same, it's all in the details, and it's how well the app is designed. Ditto the three Keynote apps. As an example, I'm not thrilled with the way Photoshop uses the Smart Object layer. It's clunky to apply, and it doesn't always register properly, despite having the smart tools active. Of all the Adobe apps, the one that's most used is Adobe Photoshop Elements. There's also a web app version of the program available. That's for people who want the latest version of Elements and who don't want to mess with the software on their computer. Let's leave the iPhone and iPad aside for the moment, but, if you're wondering, Windows 10 is also getting a Photoshop app. When I asked for details, a Microsoft rep told me the app will be available the summer of 2016. Although professional photographers, myself included, find it very good at working with raw images, Adobe's Photoshop app, Elements, comes with a slew of features that are not always as straightforward as you'd hope. That's especially true of the file format. RAW shooting requires a really big file (around 4GB), and some of the features Elements offers make it more difficult than it should be to actually get a professional result.
