krajewski8vgnvrsolutionsPhysical properties of
defect-free dense C60 networks. We study the
static structure of very dense two-dimensional
hexagonal arrays of C60 molecules. We find that
the diameter of the molecules and the amount of
bulk defects grow with the area density of the
system. This allows for the recovery of the two-
dimensional limit. The flexibility of the molecules
is characterized by a linear in-plane modulus that
increases as the area density is decreased. Our
results show that the defects dominate the
mechanical properties of the systems, with no sign
of dramatic stiffening at low strain.ATP and the
recA protein are required for recU protein
mediated recombinational restart of the DNA
replication fork in starved Escherichia coli cells.
RecU is a recombinational DNA helicase that
operates during the recovery of starved
Escherichia coli cells [Nakanishi, Y. & Sato, K.

(1998) J. Biol. Chem. 273, 3783-3788]. It is widely held that RecU moves as a single strand of DNA through a double-stranded fork, with its 5' to 3' polarity. In this study, we show that the ATP-dependent activity of RecU, which was lost when a carboxyl-terminal region (RecU-C region) was deleted from the RecU protein, is essential for RecU-mediated recombinational restart of the DNA replication fork. Moreover, we found that the DNA-dependent ATPase activity of RecA protein is required for RecU-mediated restart of the DNA replication fork. These results indicate that RecU can act in concert with RecA protein on the DNA replication fork in starved cells.

Q: Add
NSScrollView and NSTableView programmatically
I have two views, and I want to build NSScrollView programmatically. How can I do it? I tried this:
NSScrollView *listScroll = [[NSScrollView alloc]
initWithFrame
